

Chillies and peppers have specific nutritional requirements and, although it is true that they can perform reasonably well with general purpose "feeds", the best results will be achieved by using a formulation designed specifically for them.

Chilli Focus is based on commercial chilli nutrients, as manufactured by our company for over twenty years. Originally our formulations were based on academic work, but have been fine-tuned over the years by the experience of our commercial customers.

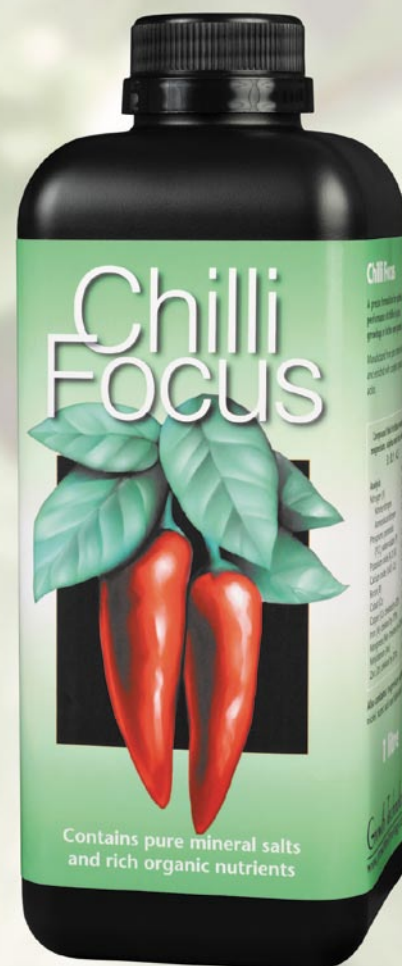

### Chilli Focus

- Chilli Focus is manufactured from the purest and most soluble mineral salts. It is fortified and enhanced with a complex profile of organic plant acids.
- It is precisely formulated for the needs of chillies and peppers – contains no urea.
- It is non-toxic and poses no environmental hazards.
- Chilli Focus is an ideal feeding programme for chillies. It can help produce healthier more vigorous plants and colourful, juicier fruits.

Chilli Focus pack sizes  
100 ml, 300 ml, 1 litre,  
5 litres, 20 litres

**Precise professional  
formulation for chillies  
– based on pure mineral  
salts and rich organic  
plant acids**

### Nitrozyme

Nitrozyme growth enhancer is particularly suitable for use with chillies, which respond very well to regular applications.

- Nitrozyme contains rich organic nutrients and growth promoters derived from natural marine sources.
- Nitrozyme can be used throughout the growing season from seedling to fruit production. Simply mix with water, and water into the root zone. Nitrozyme can also be applied as a foliar spray at any time.
- Nitrozyme is highly concentrated and goes a long way.

*Nitrozyme should be available from your usual retailer of Growth Technology products – please contact us if you have any problems.*

**for optimum plant performance**

### Feeding chillis

Mix up the Chilli Focus at the rates recommended on the label.

Plants can be fed from the seedling stage onwards. The recommendation is to feed weekly but this can be increased as needed. As long as foliage is dark green then feeding is adequate but if it becomes pale then feeding can be increased.

Increase frequency of feeding rather than feed strength. Plants can be fed up to three or four times per week without problems.

For full Chilli Focus instructions please call Growth Technology, or download from our website at [www.growthtechnology.com](http://www.growthtechnology.com)
